Design-system designer who codes: I build tokens and components, check AI output against them, and ship them.

EDUCATION

Singapore Institute of Technology – DigiPen Institute of Technology Singapore
Bachelor of Science in Computer Science in Interactive Media and Game Development *Aug 2023 – 2027 (expected)*

Millennia Institute Singapore
GCE A-Levels, including Art *Feb 2020 – Nov 2022*

PROJECTS

Tick – Design System for a Crypto Trading App Oct 2026
Figma variables, modes & component properties · Figma AI

- Built primitive-to-semantic tokens (colour, spacing, radius) with Light/Dark and Green-up/Red-up market modes
- Set the core rule, "separate value from intent", so price-up/down colours never clash with error and success states
- Let Figma's AI agent do the first pass, then reviewed its output and logged every defect with before/after evidence (clipped variants, wrong totals, crossed order-book data)

Makan Kaki – One App, Five Skins Oct 2026
Figma variables, modes, components · Mobile

- Designed 15 core components with clear naming, variants and states, plus a token set that re-skins the same app into 5 visual styles without changing any layout
- Documented each style in a style sheet and logged every design decision with its trade-off
- Standardised colour: brand, neutral and semantic palettes (50–900), no pure black or white, desaturated dark mode

Personal Portfolio Website – nicoleesther.github.io Oct 2026
HTML, CSS, JavaScript · Built with Claude Code

- Shipped two versions of one portfolio (product design and marketing) from one shared set of tokens and components
- Wrote spacing audit scripts and cut image-viewer frame time from ~100 ms to ~19 ms

Polished by Pris – AI-Assisted Seller App for a Home Nail Studio
Figma, Figma Make · Product design

- Reworked v1 into a component-based v2 with its own design system; every AI suggestion shows why it appeared, and the seller makes the final call

Game Engine Tools – Friends Frog-ever & Chroma Aug 2024 – Apr 2026
Custom C++ engines (school modules) · Windows & Android

- **Friends Frog-ever:** built a Unity-style level editor around 2 design students' workflow, so they could ship a Windows and Android game without engine code
- **Chroma:** physics lead who also took on graphics, the level editor and particles; organised the 8-person team, credited as project manager

EXPERIENCE

DBS Bank Singapore
Site Reliability Engineer Intern, Global Financial Markets Technology *May 2026 – Present*

- Automate operations with Bash and Power Automate: scheduled reports, job schedules and email alerts
- Run UAT before releases and monitor systems with the ELK stack across Linux and AWS

SKILLS

Design systems: Token architecture, variables and modes, component properties and variants, theming, documentation
Design: Interaction design, prototyping, usability testing, accessibility, responsive and empty/error states
Code: JavaScript, HTML, CSS, Vue.js, C++, Bash, Git
AI: Claude Code, Figma AI, Figma Make, Figma Plugin API; I review every AI output for correctness and consistency
